EDUCATION

Northeastern University, Khoury College of Computer Sciences

Boston, Massachusetts

B.S. in Computer Science | Concentration in Artificial Intelligence

April 2027

Relevant Coursework: Algorithms & Data Structures, Artificial Intelligence, Data Science, Theory of Computation, Object-Oriented Design, Discrete Mathematics, Computer Systems, Computer Organization & Architecture

EXPERIENCE

Biogen

Cambridge, Massachusetts

AI Engineer Co-op

January 2026 - Present

- Redesigned Biogen's enterprise AI intake platform, streamlining organization-wide evaluation, governance, and onboarding of AI initiatives across business units
- Architected and deployed a persistent enterprise AI agent using Claude SDK, Azure container services, Databricks, and Microsoft Teams, enabling contextual conversations, data retrieval, and workflow automation
- Developed AI-powered applications leveraging Azure AI Services, Databricks, Snowflake, Power Automate, and Copilot Studio to automate business processes and support data-driven decision making
- Collaborated with technical and business stakeholders to translate AI use cases into implementation plans, risk assessments, and deployment strategies

PROJECTS

RAG Study Chatbot [\[GitHub\]](#) | Python, Streamlit, ChromaDB, Sentence-Transformers, Ollama (Qwen 7B)

January 2026

- Built a **RAG study assistant** that answers from **user-uploaded content**, keeping responses **current vs. pretraining**
- Implemented a **custom RAG pipeline** (format-aware-extraction → overlap chunking → embeddings → persistent vector indexing) for controlled ingestion and retrieval
- Developed an interactive Streamlit interface supporting document upload, chat history, and source-grounded responses for course-specific study sessions

Custom AI Wordle [\[Demo\]](#) | [\[GitHub\]](#) | TypeScript, React, Node.js, Express, Python, Vite

October 2025

- Developed a **full-stack adaptive Wordle platform** with **AI opponents** that solve 3-7 letter puzzles using **algorithmic elimination** and **feedback-drive heuristics**
- **Implemented multiple** interactive modes with real-time scoreboards, **daily Wordle solve** and architected responsive gameplay with **state management** and **backend-drive validation**

Rock Paper Scissor Mind Game [\[Demo\]](#) | [\[GitHub\]](#) | TensorFlow/Keras, Next.js, FastAPI, Docker, Tailwind CSS

August 2025

- Engineered an **machine-learning-driven adaptive system** with **online learning** in **TensorFlow/Keras** integrated into a **production-ready FastAPI** backend **deployed and accessible via Vercel**
- Designed **API endpoints** for prediction, training updates, and state resets; deployed in **Docker Compose** for reproducible environments

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, R, Racket, HTML/CSS, LISP

Frameworks: FastAPI, Next.js, React, Express.js, Flask, Tailwind CSS, PyTorch, Streamlit

Libraries: TensorFlow, scikit-learn, NumPy, Pandas, Matplotlib, librosa, spotipy, Sentence-Transformers

Databases: Snowflake, PostgreSQL, Redis, MongoDB, MySQL, ChromaDB

Tools: Git, Github, Databricks, LangSmith Docker, VS Code, Linux, Jupyter Notebook, PyCharm, Jira, Ollama, Posit

Cloud & Infrastructure: Azure, AWS, Github Actions (CI/CD), Render, Vercel
