Portfolio | github.com/THuynh-91 | linkedin.com/in/tri-huynh-ai

AI and software engineer (LLMs, AI agents, backend), graduating May 2027. AI Engineer co-op at Biogen; built cruxpack.io, an LLM study platform with 98.7% claim accuracy, and a trading system for Susquehanna's Predictions Cup.

EDUCATION

Northeastern University, Khoury College of Computer Sciences **Boston, Massachusetts**
B.S. in Computer Science | Concentration in Artificial Intelligence | **GPA: 3.7/4.0** **May 2027**
Honors & Certifications: Dean's List | AWS Certified Solutions Architect - Associate (Expected Dec 2026)
Relevant Coursework: Algorithms & Data, Machine Learning, Object-Oriented Design, Computer Systems

EXPERIENCE

Biogen **Cambridge, Massachusetts**
AI Engineer, Co-op **January 2026 - June 2026**

- Designed and built the core of a persistent enterprise AI agent on Claude SDK, Azure and Databricks, used by all of Biogen's citizen developers to automate workflows from Microsoft Teams
- Led a cross-functional redesign of Biogen's AI intake platform, collaborating with requesters from every business unit, mostly non-technical, to consolidate fragmented workflows into one reviewed queue and clear a 200+ request backlog
- Automated 4 recurring business workflows across Azure AI Services, Databricks, Snowflake and Power Automate, cutting decision turnaround from months to about a week

Gyu-Kaku **Dorchester, Massachusetts**
Server **September 2023 - January 2026**

- Promoted to train new servers; ran 7-8 tables at once at peak, 20-30 hrs/week alongside full-time study

PROJECTS

CruxPack [Live | Demo] | *TypeScript, Next.js, SQLite/Drizzle, Fly.io, Gemini, Stripe* **June 2026 - August 2026**

- Built cruxpack.io, an AI study platform whose Gemini pipeline turns lecture PDFs into notes and study material, every note section linked back to its source page
- Ran an LLM-as-judge evaluation of 770 generated claims: 98.7% accurate, 8 of 10 errors hallucinations; built deterministic grounding checks that caught 5 of 5 wrong chemical structures with no false alarms
- Built a figure pipeline (locate, classify, then disambiguate) that binds each extracted diagram to the fact it illustrates, with unsafe-content screening run on our own server before any model call

Predictions Cup Trading System | *Python, asyncio, WebSockets, NumPy* **October 2026 - November 2026**

- Designed and led, with AI coding agents, a live trading system for Susquehanna's 2026 midterms market: real-time feeds from 3 venues, sub-millisecond signal-to-order latency (p95), risk caps, live monitoring and a kill switch
- Optimized the strategy by Monte Carlo simulation for the probability of finishing 1st, not expected profit; fixed all 14 defects an independent AI reviewer found, then verified with live orders on the Cup's exchange
- Wrote a working paper: Kalshi had the winner at 0.97 a median 108 minutes before the AP called the race

GitTimeline [Demo | GitHub] | *TypeScript, Preact, Canvas2D, Web Workers, Playwright* **September 2026**

- Pre-built repository histories so the owner's token never reaches the client; a visitor replays Linux's 1.48M-commit history with zero GitHub API requests, asserted by a test
- Profiled the renderer and attributed 20.9ms per frame to a single Canvas filter call; replaced it with a mip-chain bloom. p95 frame time fell from 50ms to 33ms, one full vsync

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Java, C, C++, Rust, SQL, HTML, CSS
AI/ML: LLMs, AI agents, LLM evaluation, prompt engineering, Claude SDK, PyTorch, scikit-learn, NumPy, Pandas
Frameworks: FastAPI, Next.js, React, Preact, Node.js, Express.js, Flask, Vite, REST APIs
Data: Databricks, Snowflake, PostgreSQL, SQLite/Drizzle, Redis, MongoDB
Cloud, DevOps & Testing: Azure, AWS, Vercel, Fly.io, Docker, GitHub Actions, Git, Linux, Playwright, Vitest

LEADERSHIP

Gia Dinh Phat Tu, *Team Leader for 6 years*: led weekly youth lessons, trained junior leaders **Member 2013 - 2024**
